

How Does Crawl Space Encapsulation Help with Bulk Moisture Problems?

Q: What is bulk moisture or bulk water?

A: Rain, snow, or groundwater.

Why is there moisture in your crawl space? Bulk water gets into a Virginia home by:

You can get rid of moisture under your house by fully encapsulating your crawl space to prevent water and moisture from getting into your home.

The Crawl Space Encapsulation Process

1. Addressing standing water issues
2. Cleaning the crawl space
3. Installing a vapor barrier
4. Air sealing your crawl space
5. Installing crawl space insulation

With house crawl space encapsulation, you are installing a series of barriers that address the different ways that moisture, humidity, and water can enter your home.

Additional Benefits of Crawl Space Encapsulation

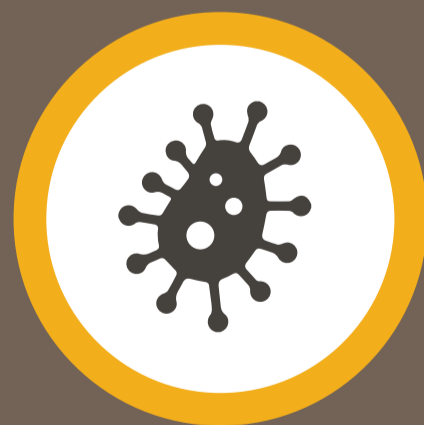

On top of keeping bulk water out of your Virginia Beach home, crawl space encapsulation:

Lowers heating and cooling bills

Creates a more comfortable home

Prevents mold growth

Improves indoor air quality
